

TECHNICAL DATA SHEET

i-FIN AL FUME SUPPRESSANT

i-Fin Al Fume suppressant is a surface-active liquid product, specially developed for its incorporation into anodizing sulphuric aluminium baths. It forms an extremely fine and compact layer of foam on the surface, which prevents the harmful vapors formation and avoids, almost completely, the explosions produced by detonating gas.

The formation of a foam layer on bath surface regulates gaseous emission and thereby improves the working atmosphere. The impurities like dirt, grease, etc. which sticks to the foam can easily be removed, leaving the bath cleaner and stable.

OPERATING CONDITIONS

	Unit	Range	Optimum
I-Fin Al Fume suppressant	ml/ltr	0.3 to 0.6	0.5
pH	-	5.0 -6.0	5.5

*Issued on 04.01.2008
Supersedes all earlier*
