

TECHNICAL DATA SHEET

i-FIN AL ANTIPRECIPITATION ADDITIVE

i-Fin Al Antiprecipitation Additive is liquid additive used in alkaline bath for preventing the precipitation process. It contains organic compound and no complexing agent, which prevents the hydrolysis of the bath. It avoids the scaling of the heating elements and the tank. It works even with higher concentration of aluminium in the bath

OPERATING CONDITIONS

	Unit	Range	Optimum
i-Fin Al Antiprecipitation additive	gm/ltr	1 to 5	2.5*
pH	-	6 - 7	6.5

* Depends upon the concentration of the aluminium in the bath
